

BEATS PER MINUTE (BPM)

The advanced form has two fields.

The field "BPM" for entering the number of beats per minute.

And the field "BPM note value" for selecting the note value to use as a reference, which defaults to a quarter note.

Tip

The field "BPM" can contain any character string.

And you can set the "BPM Note Value" field to "empty".

In this way, you can add any text that is displayed in the top right-hand corner.
