Typical usage is to add additional annotations to song parts

Some examples ...

A Campfire Song   (written by "Artist A")   as played by "Artist B"

Chorus   (with ad-libs)

‖ G | ⁒. | C | D   ‖

Verse   ... without keys ...

‖ Am | C | Am | D   ‖

Chorus   no backing vocals !!!

‖ G | ⁒. | C | D   ‖

Verse   with acoustic guitar and bass only

‖ Am | C | Am | D   ‖

                                  Chorus   "bass & drums only"

‖ G | ⁒. | C | D   ‖

                                  Verse   with ah-uh-ah backing vocals

‖ Am | C | Am | D   ‖

A text line can be centered, left or right aligned.

The default is left alignment.

Use a double space to "push" the text to the next column.

<center>**See these Examples**</center>

Ex.1 Single column

Left

	Center	
		Right

Ex.2 Two columns

Left	**Center**	
Left		**Right**
	Center	**Right**

Ex.3 Three columns

Left	**Center**	**Right**

<center>**A border is only added to the first non-empty column**</center>

Left		
	Center	
		Right
Left	**Center**	
Left		**Right**
	Center	**Right**
Left	**Center**	**Right**

The center column gets adjusted to the space available

If there is a very long text in the left column   CENTER   RIGHT

LEFT   CENTER   If there is a very long text in the right column

A long text in the left column   And a long text in the center   RIGHT

LEFT   A long text in the center   And a long text in the right column

But of course - if there is too much text it will overlap

A long text in the left column A long text in the center And a long text in the right column
